Summary

Backend Developer with 1+ year of experience building scalable REST APIs, Django-based services, and cloud-integrated systems. Proven track record of improving API reliability, reducing latency, and delivering production-ready applications across EdTech and SaaS domains. Seeking backend engineering roles where I can drive performance and system design at scale.

Work Experience

Self-Employed

Remote

Freelance Backend Developer

Aug 2025 – Jan 2026

- Architected and delivered the backend for a production-ready EdTech mobile application using **Django, Firebase, and PostgreSQL**.
- Implemented secure user authentication, real-time data sync, and role-based access control using Firebase Authentication and Firestore.
- Designed and optimized REST APIs handling high concurrency with seamless iOS/Android integration.
- Managed end-to-end development lifecycle including system architecture, cloud deployment, and performance tuning.

Bigfig.AI

Bengaluru, Remote

Software Development Engineer I

Nov 2024 – May 2025

- Scaled Django backend services to support 1000+ daily active users, improving API reliability by **35%**.
- Reduced database query latency by **30%** through targeted PostgreSQL indexing and query optimization.
- Delivered two internal platform modules on schedule, collaborating closely with product and engineering teams.

Software Development Engineer Intern

Mar 2024 – Nov 2024

- Built and maintained REST APIs using Django REST Framework, saving **15 hours** of development time per sprint.
- Integrated OAuth 2.0 authentication flows, improving login performance by **30%**.
- Optimized application response speed by **25%** through Redis caching and database query improvements.

Unity Labs

Remote

Full Stack Developer Intern

Jan 2024 – Mar 2024

- Developed 15+ reusable UI components with React and Next.js, accelerating feature delivery by **20%**.
- Optimized dashboard API integrations, reducing frontend load time by **25%**.
- Delivered fully responsive, cross-browser compatible interfaces across all major platforms.

Education

Indian Institute of Information Technology Kota

Kota, India

Bachelor of Technology in Computer Science Engineering

June 2025

Skills

- **Languages:** Python, C++, JavaScript, TypeScript, HTML5, CSS
- **Libraries & Frameworks:** Django, Django REST Framework, React, Next.js, Node.js
- **Tools & Software:** Git, Docker, NPM, Postman, REST APIs, AWS (EC2, S3)
- **Databases:** PostgreSQL, MongoDB, Firebase
- **Subjects:** Data Structures and Algorithms, Object-Oriented Programming, System Design, Operating Systems, Database Management Systems, SDLC, Agile Methodology

Projects

- **VisionPad – Real-Time Collaboration Platform** ([Link](#)) *Next.js, React, Liveblocks, Clerk, Convex*
 - Built real-time collaborative whiteboard supporting multi-user live sync with sub-**200ms** latency using Liveblocks.
 - Enforced secure role-based authentication and persistent shared state with Clerk and Convex.
 - Led end-to-end architecture planning and deployed on Vercel with zero-downtime releases.
- **MirrorAPI – Developer API Toolkit** ([Link](#)) *Django, DRF, Django Channels, React, WebSockets*
 - Built a full-stack API development toolkit enabling developers to instantly create mock endpoints, inspect live webhooks, and clone external APIs for local testing.
 - Implemented real-time webhook inspection using Django Channels and WebSockets, streaming live payloads directly to the browser.
 - Engineered an API cloning feature supporting authenticated external requests with custom headers and body capture.
 - Deployed backend on Render and frontend on Vercel with a multi-tenant namespace architecture.

- **FilmZ – Movie Discovery Application** ([Link](#))

React, Redux, TMDB API

- Developed movie browsing platform with Redux state management and TMDB API integration.
- Implemented advanced search and filtering, improving content discoverability and user experience.

- **Medical Image Classification System**

Python, TensorFlow, CNN

- Designed CNN model for pneumonia detection achieving **89%** test accuracy on chest X-ray dataset.
- Deployed inference pipeline via Flask API for real-time medical image classification.
- Evaluated model performance using confusion matrix and AUC metrics to ensure clinical reliability.

Certifications and Achievements

- **React Complete Guide** – Udemy | Covers Hooks, Router, Redux, and modern React patterns.
- **Full Stack Web Development** – Udemy | Extensive training in frontend and backend technologies.
- **Algorithm Problem Solving:** Solved **700+ problems** on LeetCode focusing on data structures, algorithms, and optimization.
